

REQUALIFICATION & ALUMIFURB

Choosing to go with refurbished and requalified cylinders is becoming the right choice for more businesses. ASG's proprietary Alumifurb process makes it possible for companies to renew their own cylinder fleet or to purchase refurbished cylinders, ending up with a product which is often difficult to distinguish from new. Short for "aluminum refurbishment," Alumifurb is an ASG exclusive testing and refurbishing process which transforms used aluminum cylinders to look like new.

Alumifurb is an extremely cost-effective approach to buying new cylinders. We requalify each cylinder, remove any labels, buff it free of the old clear coat, repaint shoulders as needed in the correct color for the application, and finish with a fresh, durable clear-coat. You get a cylinder in like-new condition for a fraction of the price.

Alumifurb

Complete Refurbishment of Aluminum Medical Cylinders

- Recertification using Ultrasonic Examination or Hydrostatic Testing
- Buff Cylinder (Including Dome)
- Repaint Cylinder Dome per CGA Designation
- Apply Temperature-Sensitive Temp-Alert Clear Coat
- Replacement of Post Valve and O-Ring as Needed or by Request

Requalification

Professional Cylinder Maintenance Services

- Recertification using Ultrasonic Examination or Hydrostatic Testing
- Replacement of Post Valve and O-Ring as Needed or by Request
